PULSEIQ

PHASE 3 REVIEW REPORT

DATA ANALYTICS TRACK

Name: Aiswarya A.

Track: Data Analytics | **Phase:** 3

Project: PulseIQ

GitHub: https://github.com/Aiswarya3006/PulseIQ

Git Tag: phase-3 | **Latest Commit:** bc8c492

1. PHASE 3 TASK COMPLETION SUMMARY

I completed all five Phase 3 tasks (Tasks 11–15), covering financial analysis, receivables, workforce analytics, forecasting and executive reporting.

Task	Work Completed	Status	Evidence
11	P&L and Expense Analysis	Done	reports/task11_pl_summary.png
12	Receivables and Ageing Analysis	Done	reports/task12_dashboard.png
13	Cross-Department Impact Analysis	Done	reports/task13_cross_department_dashboard.png
14	Workforce Anomaly, Attrition Risk and Forecast Analysis	Done	reports/task14_anomaly_analysis.png
15	Executive Company-Health Scorecard with eight KPIs	Done	reports/Task15_Executive_Scorecard.png

Additional evidence is available in the GitHub repository's reports folder.

2. PROOF THAT THE PROJECT WORKS

- Task 15 Python files compiled successfully without syntax errors.
- The executive dashboard displayed eight KPIs for September 2026.
- Revenue (M16) and Attrition (M04) detail navigation was tested.
- The scorecard was checked in A4 print preview and exported as PDF.
- Null and suppressed values were not treated as zero; department target compliance used configured targets.

September 2026 Executive Scorecard

KPI	Metric ID	Actual
Workforce Headcount	M01	440
Monthly Attrition	M04	0.00%
Employer Cost	M09	₹55,014,384
Overtime Share	M11	0.00%
Attendance Rate	M13	95.57%
Revenue	M16	₹80,268,200
Net Profit	M17	₹14,985,979
Operating Margin	M18	18.67%

Department rates represent medians of reportable department rates. Target compliance reflects department-level compliance.

Additional project validation: Four automated tests passed; 29,775 records passed contract validation with zero errors; ETL processed 62,770 records with zero rejected records.

3. WHAT I LEARNED

I learned to convert raw business data into management insights through financial, receivables and workforce analysis. I improved my understanding of aggregation grain, SQL joins, data validation, privacy thresholds and dashboard reporting. I also learned to communicate business performance through meaningful KPIs.

4. PROBLEMS FACED AND SOLUTIONS

- **Database path confusion:** Identified and used the correct active project database.
- **Incorrect join totals:** Aggregated data at the appropriate grain before joining sources.
- **Null and suppressed values:** Preserved privacy rules and avoided replacing unavailable values with zero.
- **Dashboard issues:** Fixed Python syntax and layout problems and checked the application through compilation and testing.
- **Evidence and Git:** Organised screenshots, committed the implementation and pushed the phase-3 tag to GitHub.

5. MINI CHALLENGE — MANAGEMENT QUESTION

Question: Why did workforce cost increase in a particular month, such as August?

- **Task 11:** Compare monthly expenses, revenue, profit, expense categories and top vendors.
- **Task 13:** Compare department-level employer costs, overtime, leave days per head and attrition indicators.
- **Task 15:** Review employer cost, overtime, attendance, attrition, revenue and profit KPIs.

I would reconcile monthly totals and verify department-level contributions before identifying the cause. This avoids incorrect conclusions from duplicated joins or inconsistent aggregation.

6. SELF-ASSESSMENT

I can identify the correct data grain, aggregate measures before joining datasets, validate totals and explain findings using dashboards. I am more confident in presenting business insights with clear metrics and evidence.

7. PLAN FOR THE NEXT PHASE

I plan to strengthen advanced SQL and data analysis, improve dashboard design, practise management-level reporting and apply feedback from the Phase 3 review.

8. CONCLUSION

I completed Tasks 11–15 of the PulseIQ Phase 3 project, prepared analytical dashboards and evidence, and pushed the completed implementation to GitHub. I am submitting this report for review and look forward to progressing to Phase 4 after approval.
